

Instruction manual

■ How to play PLOCO

1. Assemble the blocks

Connect block parts and stick parts to create your own art/design work.

2. Start the RFID reader

Slide the switch equipped on the side of the reader/writer to turn on the power. Then, a green light will light up at the lower side of the display of the reader.

The RFID reader is ready to scan when a second green light blinks next to the first green light on the display.

3. Launch the app and scan

1) Download the BLOCK BATTLER app and launch it.

2) If you want to execute a battle, proceed in the order of "Play Game" ⇒ "MODE SELECT" ⇒ "DIFFICULTY LEVEL".

3) After the "DEVICE CONNECT" screen is displayed, bring the display of the reader closer to your own art/design work. Keep the display of the reader evenly close to your own art/design work so that all blocks are appropriately scanned.

4) If the reader makes a beeping sound, the reading is successful.

NOTE:

When the reader does not make a beeping sound, bring the reader very near the block, or replace the block to be read.

4. About the battle

1) "Attribute" is determined according to the number of colors of the read blocks.

2) When the battle screen is displayed on the app, read "Special Block". The strength of the special move changes depending on the performance of the special block.

3) Follow the in-app controls and let your own art/design work fight it out.

NOTE:

If a light of the reader does not blink, try the following methods.

- Make sure whether the reader is turned on.
- Make sure whether the reader is charged.

When the reader does not make a beeping sound and does not read, try the following methods.

- Make sure whether the scan screen of the BLOCK BATTLER app is open.
- Restart the BLOCK BATTLER app or the reader/writer.

For iPhone (iOS)

- When connecting the reader to the app, you need to select the reader/writer to be connected.
- Confirm the serial number (example: 3219101185) written on the back side of the reader, and select the same number on the app screen. The serial number is automatically detected and displayed on the app screen, so that the serial number does not have to be entered directly.

<Set contents>
